

CHROME EXTENSION · FREE

Tab Downloader for Google Docs

Google Docs lets you split a document into tabs — but download only gives you “current tab” or “everything”. This extension gives you a checklist.

Tick the tabs you need, choose one or more formats, click once. Every tab becomes its own file with a sensible name.

[Get it on the Chrome Web Store →](#)

Works in Chrome, Brave, Edge and other Chromium browsers. No account, no OAuth, no servers — it uses the Google session you already have. Not affiliated with Google.

Why people install it

Pick exactly the tabs you need

Every tab and nested subtab in a checklist, with All / None / Current shortcuts.

Eight formats, several at once

PDF, Word, OpenDocument, RTF, plain text, Markdown, HTML, EPUB — select more than one and get each tab in each format.

Sensible file names

“Document – Tab.pdf”, numbered, or tab-only. Subtabs can carry their parent’s name. Save into a folder or bundle into one .zip.

Fast on big documents

Markdown and text of a 30-tab document arrive in a second. PDF/Word are paced to Google’s export limit with automatic retry and an ETA.

Private by design

The only server it talks to is docs.google.com. No analytics, no telemetry, no remote code. Preferences stay in your browser.

Fire and forget

Close the popup — downloads keep running in the background. Reopen it any time to see progress or cancel.

How it works

1 Open a Google Doc

Any document with tabs. Click the extension icon.

2 Tick tabs, pick formats

Preview the file names before you download.

3 Download

Files land in Downloads, one per tab (or one zip).

.pdf

.docx

.odt

.rtf

.txt

.md

.html

.epub
